

CRICFIT AI — BATTING ANALYSIS PERFORMANCE REPORT

Activity: **Batting Analysis** | Report ID: CF-CD6A786C | Date: 08 Sep 2026, 06:37 PM

92_{/100}
Overall Score (Low Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You executed a powerful pullshot with great timing. Your balance and core were solid, keeping you stable through the swing. The main area to work on is the slight asymmetry in your elbow and knee angles, which can limit power and increase injury risk. Your overall movement quality was close to the benchmark, showing you're on the right track.

Identified Stroke: Pullshot (AI Confidence: 99.7%)

PROGRESS & EFFICIENCY COMPARISON:

Compared to your last two sessions, your movement quality similarity has risen from 95 to 95.8, and your symmetry score improved from 91 to 91.7. Your balance and core stability remain consistently high, but the mobility indicator shows a small gap that hasn't closed yet. Keep focusing on hip mobility to see further gains.

COACH'S ATHLETIC BOOST:

"Great job staying consistent-your dedication is already paying off! Keep pushing, and you'll turn those small tweaks into big on-field impact."

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	95/100	75.0 / 100	Elite
Lower Body Stability	82/100	75.0 / 100	Good
Hip Mobility	69/100	75.0 / 100	Needs Work
Core Stability	95/100	75.0 / 100	Elite
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	91/100	75.0 / 100	Elite
Movement Quality	95/100	75.0 / 100	Elite

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Single-Leg Romanian Deadlift (3 sets × 8 reps each leg) — Target: Glutes, hamstrings, hip stability

How this fixes your technique: Builds hip hinge control and balances leg strength, reducing knee angle discrepancy.

2. Standing Cable Row with Rotational Focus (3 sets × 10 reps) — Target: Upper back, shoulder stability

How this fixes your technique: Improves elbow alignment and shoulder rotation symmetry.

3. Dynamic Hip Flexor Stretch with Lateral Reach (3 sets × 30 sec each side) — Target: Hip flexors, mobility
How this fixes your technique: Increases hip range, reducing mobility deviation.

Long-Term Performance Impact: Consistent practice of these drills will tighten your hip hinge, align your elbow and knee angles, and reinforce core stability, leading to more powerful, accurate shots and lower injury risk.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	Oatmeal with banana and a scoop of whey protein
Post-Training Recovery:	Grilled chicken breast with sweet potato and steamed veggies
Hydration Strategy:	Start with 500ml water 2 hours before, sip 250ml every 15 minutes during play, and replace electrolytes with a sports drink after 30 minutes of play
Key Power Foods:	• Oats - steady carbs for energy • Banana - potassium for muscle function • Chicken - lean protein for repair
