

CRICFIT AI — BOWLING ANALYSIS PERFORMANCE REPORT

Activity: **Bowling Analysis** | Report ID: CF-BD8FE85D | Date: 08 Sep 2026, 06:38 PM

70_{/100}
Overall Score (Moderate Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You bowled a right-hand spin delivery that looked very similar to Chris Woakes, with a movement quality score of 69.7%. Your arm position was solid and the spin action was clear, but the body symmetry was a bit off and the timing of your footwork was slightly delayed. Overall, you kept a good rhythm and your core stayed engaged, but there's room to tighten up the balance and coordination for more consistent line and length.

Action Profile: Right Spin | Closest Pro Bowler Match: Chris Woakes

PROGRESS & EFFICIENCY COMPARISON:

Compared to your last three sessions, your movement quality is steady at around 69-70, showing consistent form. The symmetry score of 0.638 is similar to previous values, indicating no major drop in balance. Keep focusing on the same fundamentals to maintain this consistency.

COACH'S ATHLETIC BOOST:

"Great job staying consistent! Your dedication to refining your spin will pay off on the field-keep up the hard work and you'll see even sharper accuracy soon!"

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	66/100	75.0 / 100	Needs Work
Lower Body Stability	61/100	75.0 / 100	Needs Work
Hip Mobility	71/100	75.0 / 100	Good
Core Stability	66/100	75.0 / 100	Needs Work
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	63/100	75.0 / 100	Needs Work
Movement Quality	69/100	75.0 / 100	Needs Work

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Single-Leg Balance on BOSU (3 sets × 30 sec hold per leg) — Target: Lower body stability and core control

How this fixes your technique: Improves proprioception and forces the core to stabilize the pelvis, reducing symmetry issues during the delivery stride.

2. Hip Mobility Drills (90/90 Split Squat with Twist) (3 sets × 10 reps per side) — Target: Hip flexibility and rotational control

How this fixes your technique: Enhances hip rotation and allows a smoother, more powerful release, tightening timing of the footfall.

3. Medicine Ball Rotational Throws (3 sets × 8 reps per side) — Target: Core rotation and coordination

How this fixes your technique: Builds explosive rotational power and synchronises arm and hip movement, improving delivery timing and consistency.

Long-Term Performance Impact: Sticking to this routine will sharpen your balance, tighten your core, and fine-tune the timing of your footwork. These changes translate to more accurate line and length, higher spin consistency, and a lower injury risk from repetitive strain. Over time, you'll bowl with greater confidence and control, making you a more reliable bowler in any match situation.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	A banana with a handful of almonds or a small bowl of oatmeal with berries 1-2 hours before bowling sessions to provide steady carbs and protein.
Post-Training Recovery:	A protein shake with whey protein and a banana, or a chicken-rice bowl with mixed veggies within 30 minutes after training to aid muscle repair and glycogen refill.
Hydration Strategy:	Drink 500 ml of water 2 hours before, then sip 250 ml every 15 minutes during the session. Add a pinch of sea salt or an electrolyte drink after 30 minutes of play to replace sodium and potassium.
Key Power Foods:	• Oats - provides slow-release carbs for sustained energy • Chicken breast - high-quality protein for muscle repair • Spinach - rich in iron and magnesium to support endurance and reduce fatigue
