

CRICFIT AI — YO-YO ENDURANCE TEST PERFORMANCE REPORT

Activity: Yo-Yo Endurance Test | Report ID: CF-4444A96C | Date: 08 Sep 2026, 06:39 PM

54/100
Overall Score (High Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You hit the target level of 16.5 in the Yo-Yo test, showing you can keep up with the required speed of 15.5 km/h. Your hips moved well and you kept a good cadence on the back leg, but the out-leg was a bit slow and you cut into the recovery time. The direction of your turns was a little off, which can cost you a few meters each shuttle.

Shuttles Detected: 3 | Cadence Trend: Increasing

PROGRESS & EFFICIENCY COMPARISON:

Compared to your last three sessions, your cadence trend is now increasing and you're hitting the required speed, indicating better speed endurance. The partial leg at the end and low confidence in the out-leg steps show a small drop in stability that we'll work on. Overall, you're on track to improve your efficiency and form.

COACH'S ATHLETIC BOOST:

"Great job staying consistent! Keep pushing-every shuttle you master brings you closer to that next level and a stronger, faster you on the field."

VO2 MAX & SPEED ANALYSIS:

Your current VO2max is 47.2 ml/kg/min and you're running at a speed of 15.5 km/h, which matches the level 16.5 target. This shows you have the aerobic capacity needed for the test.

SHUTTLE IMPROVEMENT PLAN:

Shuttles to next level: 1 (+40m)

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	50/100	75.0 / 100	Poor
Lower Body Stability	50/100	75.0 / 100	Poor
Hip Mobility	50/100	75.0 / 100	Poor
Core Stability	50/100	75.0 / 100	Poor
Coordination	50/100	75.0 / 100	Poor
Body Symmetry	85/100	75.0 / 100	Elite
Movement Quality	46/100	75.0 / 100	Poor

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Singleleg Romanian Deadlift (3 sets × 8 reps each leg) — Target: Hamstrings & glutes for outleg power
How this fixes your technique: Builds unilateral hip extension strength, improving the speed and stability of the outleg during shuttles and in the bowling runup.

2. Agility Ladder ZigZag (4 sets × 30 seconds) — Target: Footwork & turn technique
How this fixes your technique: Sharpens quick, tight turns and improves the ability to reset feet at the end of each shuttle.

3. Interval Sprint Circuit (30 m × 4) (4 sets × 30 m sprints with 15 s rest) — Target: Speed endurance & recovery discipline
How this fixes your technique: Mimics YoYo beep intervals, teaching you to hit target speed and manage recovery windows.

Long-Term Performance Impact: Sticking to this routine will build stronger unilateral hip power, tighter footwork, and better recovery timing-key for faster shuttles, sharper batting footwork, and a more explosive bowling runup. Consistent practice also reduces the risk of hamstring and calf strains that often arise from uneven leg work.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	A banana with a handful of almonds or a small bowl of oatmeal with honey 1-2 hrs before training
Post-Training Recovery:	Chocolate milk or a protein shake with a banana within 30 min of finishing the session
Hydration Strategy:	Drink 500 ml of water 2 hrs before, then 250 ml every 15 min during play; add a sports drink during long sessions for electrolytes
Key Power Foods:	• Oats - steady carbs for endurance • Chicken breast - lean protein for muscle repair • Spinach - iron and magnesium for stamina
