

CRICFIT AI — BATTING ANALYSIS PERFORMANCE REPORT

Activity: **Batting Analysis** | Report ID: CF-1FD09D82 | Date: 07 Sep 2026, 09:35 PM

92_{/100}
Overall Score (Low Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

The player executed a clean pullshot with great timing and symmetry. The shot was powerful, but the data shows a slight mobility gap in the hips and ankles, which can limit full extension. Core stability is just a touch below ideal, meaning the torso could wobble under load. Overall, the technique is solid but can be sharpened for more power and consistency.

Identified Stroke: Pullshot (AI Confidence: 99.7%)

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	95/100	75.0 / 100	Elite
Lower Body Stability	82/100	75.0 / 100	Good
Hip Mobility	69/100	75.0 / 100	Needs Work
Core Stability	95/100	75.0 / 100	Elite
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	91/100	75.0 / 100	Elite
Movement Quality	95/100	75.0 / 100	Elite

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Dynamic Hip Flexor Stretch (3 sets × 30 sec each side) — Target: Hip flexors and ankle dorsiflexion

How this fixes your technique: Improves hip range so the batter can fully extend, increasing bat speed and power

2. Single■Leg Romanian Deadlift (3 sets × 10 reps each leg) — Target: Hamstrings, glutes, core

How this fixes your technique: Builds hip stability and core engagement, reducing wobble during the swing

3. Side Plank with Hip Drop (3 sets × 15 sec each side) — Target: Obliques, transverse abdominis

How this fixes your technique: Strengthens lateral core muscles, improving torso stability and shot consistency

Long-Term Performance Impact: By consistently working on hip mobility and core strength, the batter will achieve a fuller swing, higher bat speed, and more consistent shot placement. The drills also reinforce proper alignment, lowering the risk of hamstring or lower back injuries during long innings.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	Oatmeal with sliced banana and a splash of milk (30■45 mins before)
Post-Training Recovery:	Whey protein shake with a banana and a handful of berries (within 30 mins)
Hydration Strategy:	Drink 500ml water 30 mins before, then sip 250ml every 15 mins during play, adding a sports drink with electrolytes after 60 mins
Key Power Foods:	• Sweet potato – provides glycogen for endurance • Salmon – omega■3s for joint health • Spinach – iron and antioxidants for recovery
