

CRICFIT AI — BATTING ANALYSIS

PERFORMANCE REPORT

Activity: **Batting Analysis** | Report ID: CF-2B00FECF | Date: 07 Sep 2026, 10:05 PM

92_{/100}
Overall Score (Low Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

The player executed a pullshot with great confidence and timing, matching the reference clip 95.8% of the way. Their body alignment was mostly symmetrical, but there was a small 8° difference in elbow and knee angles, and a 12° mobility gap that can limit power. Overall, the shot was solid, but tightening hip mobility and core stability will help them hit harder and stay balanced.

Identified Stroke: Pullshot (AI Confidence: 99.7%)

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	95/100	75.0 / 100	Elite
Lower Body Stability	82/100	75.0 / 100	Good
Hip Mobility	69/100	75.0 / 100	Needs Work
Core Stability	95/100	75.0 / 100	Elite
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	91/100	75.0 / 100	Elite
Movement Quality	95/100	75.0 / 100	Elite

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

- 1. Hip Mobility Drills (e.g., Pigeon Stretch with a twist) (3 sets × 30 sec hold per side) — Target: Hip flexors and glutes**

How this fixes your technique: Improving hip flexibility allows the batter to fully rotate and open the hips during the pullshot, increasing bat speed and power while maintaining balance.
- 2. Single Leg Balance on BOSU Ball (4 sets × 45 sec hold per leg) — Target: Core and ankle stability**

How this fixes your technique: Enhances proprioception and core control, ensuring both legs stay synchronized during the swing, reducing asymmetry in knee angles.
- 3. Rotational Medicine Ball Throws (3 sets × 10 reps each side) — Target: Obliques and thoracic spine**

How this fixes your technique: Builds rotational power and core stability, allowing the batter to generate more bat speed and maintain a stable centre of gravity during the shot.

Long-Term Performance Impact: Consistently working on hip mobility, balance, and core rotational strength will give the batter a fuller, more powerful pullshot, improve timing, and reduce the risk of lower-body injuries. The drills also reinforce

good posture and joint symmetry, leading to more consistent shot execution across all shots and better overall match performance.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	A banana with a handful of almonds or a small bowl of oatmeal with honey 1■2 hours before batting practice
Post-Training Recovery:	A protein shake with whey protein, a banana, and a splash of milk, or a lean chicken breast with sweet potato within 30 minutes after training
Hydration Strategy:	Drink 500ml of water 30 minutes before sessions, then sip 250ml every 15 minutes during play; include a sports drink with electrolytes during long sessions to replace sodium and potassium
Key Power Foods:	• Oats – provides sustained energy and promotes glycogen storage • Spinach – rich in iron and magnesium for muscle function • Greek yogurt – high protein for muscle repair and calcium for bone health
