

CRICFIT AI — BOWLING ANALYSIS

PERFORMANCE REPORT

Activity: **Bowling Analysis** | Report ID: CF-3D3A650B | Date: 07 Sep 2026, 08:58 PM

70_{/100}
Overall Score (Moderate Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You're a right-hand spin bowler who pulls off a solid delivery, similar to Chris Woakes, but your run-up and release timing feel a bit off. Your arm action is strong, but the body doesn't stay as symmetrical as it should, which can make your spin less consistent. The computer sees a decent overall technique (about 70% match), but the slight timing lag and symmetry gap suggest room for improvement. Fixing these will help you bowl more accurate, spin-heavy deliveries with less fatigue.

Action Profile: Right Spin | Closest Pro Bowler Match: Chris Woakes

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	66/100	75.0 / 100	Needs Work
Lower Body Stability	61/100	75.0 / 100	Needs Work
Hip Mobility	71/100	75.0 / 100	Good
Core Stability	66/100	75.0 / 100	Needs Work
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	63/100	75.0 / 100	Needs Work
Movement Quality	69/100	75.0 / 100	Needs Work

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Single-Leg Romanian Deadlift (3 sets × 8 reps per leg) — Target: Posterior chain & core stability

How this fixes your technique: Strengthens the glutes and hamstrings while forcing the core to stay rigid, improving hip rotation timing and preventing lower-back tilt during the delivery.

2. Medicine Ball Rotational Throw (3 sets × 10 throws per side) — Target: Rotational power & hip-shoulder coordination

How this fixes your technique: Develops explosive hip rotation that syncs with shoulder movement, tightening the timing gap between the legs and arm for sharper spin.

3. Plank with Shoulder Tap (3 sets × 15 taps per side) — Target: Core & shoulder stability

How this fixes your technique: Builds a stable core and shoulder girdle, reducing unwanted tilt and ensuring the arm follows a straight, controlled path.

Long-Term Performance Impact: By consistently working on hip-shoulder timing and core strength, you'll deliver spin with greater consistency and power, lowering the risk of shoulder and lower-back strain. The drills also enhance balance and

proprioception, so you'll maintain form even after long spells, translating to better match performance and fewer injuries.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	A banana with a handful of almonds or a small bowl of oatmeal with honey 1–2 hours before bowling practice
Post-Training Recovery:	A protein shake with whey protein, a banana, and a splash of milk, or a chicken■rice bowl with mixed veggies within 30 minutes after training
Hydration Strategy:	Drink 500ml of water 2 hours before the session, then sip 200ml every 15 minutes during play; include a sports drink with electrolytes during long sessions to replace sodium and potassium lost in sweat
Key Power Foods:	• Oats – provides sustained energy and promotes recovery • Spinach – high in iron and magnesium for muscle function • Greek yogurt – rich in protein and probiotics for gut health
