64_{/100}
Overall Score (High Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You're a right-hand fast bowler who's getting good speed from your arm swing, but your body isn't moving as smoothly as it could. Your symmetry score shows a slight imbalance—likely your hips or shoulders aren't rotating in lock-step, which can slow you down and make your line a bit off. The timing deviation is small, so you're almost there, just need to tighten the flow. With a few focused drills you can get that extra 1-2 metres of speed and a steadier line.

Action Profile: Right Fast | **Closest Pro Bowler Match:** Tim Saudi

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	57/100	75.0 / 100	Needs Work
Lower Body Stability	57/100	75.0 / 100	Needs Work
Hip Mobility	62/100	75.0 / 100	Needs Work
Core Stability	59/100	75.0 / 100	Needs Work
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	59/100	75.0 / 100	Needs Work
Movement Quality	60/100	75.0 / 100	Needs Work

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Single-Leg Romanian Deadlift (3 sets × 10 reps per leg) — Target: Hip extensors & core stability

How this fixes your technique: Builds a strong, balanced hip drive so the hips and shoulders rotate together, giving you a more powerful, linear delivery

2. Medicine Ball Rotational Throw (3 sets × 8 reps per side) — Target: Core rotation & shoulder-scapular stability

How this fixes your technique: Mimics the twist of a delivery, training the core to rotate fully before the arm swing, improving speed and line accuracy

3. Band External Rotation with Scapular Retraction (3 sets × 15 reps) — Target: Rotator cuff & scapular control

How this fixes your technique: Strengthens the muscles that keep the shoulder in the correct position, reducing lag and preventing shoulder strain

Long-Term Performance Impact: By tightening hip-shoulder timing and core stability, you'll transfer more energy to the ball, boosting pace and line precision. Consistent drills also build muscular balance, cutting injury risk and keeping you fresh for longer spells. Over time, you'll see faster deliveries, steadier lines, and a lower chance of back or shoulder problems.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	A banana with a small handful of almonds or a wholegrain toast with peanut butter 1-2 hours before bowling
Post-Training Recovery:	Chocolate milk or a protein shake with a piece of fruit within 30 minutes of training
Hydration Strategy:	Drink 500ml of water 2 hours before, then sip 250ml every 15 minutes during play; add a sports drink with electrolytes if sessions exceed 90 minutes
Key Power Foods:	• Oats – steady energy for long spells • Chicken breast – lean protein for muscle repair • Spinach – iron and magnesium for endurance
