

CRICFIT AI — YO-YO ENDURANCE TEST PERFORMANCE REPORT

Activity: Yo-Yo Endurance Test | Report ID: CF-B345EDDC | Date: 07 Sep 2026, 09:22 PM

54/100
Overall Score (High Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You hit the target score of 16.5, showing good speed and stamina. Your backleg steps were strong and you kept a steady rhythm as the test progressed. However, you struggled with the first outleg step and your recovery time was too short, cutting into the required rest period. This means your footwork and timing need tightening.

Shuttles Detected: 3 | Cadence Trend: Increasing

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	50/100	75.0 / 100	Poor
Lower Body Stability	50/100	75.0 / 100	Poor
Hip Mobility	50/100	75.0 / 100	Poor
Core Stability	50/100	75.0 / 100	Poor
Coordination	50/100	75.0 / 100	Poor
Body Symmetry	85/100	75.0 / 100	Elite
Movement Quality	46/100	75.0 / 100	Poor

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Singleleg balance with hip abduction (3 sets × 10 reps each leg) — Target: Hip stabilisers and core

How this fixes your technique: Improves the ability to generate a strong, controlled pushoff from the rear foot and stabilises the hip during rapid direction changes, directly fixing the weak outleg step.

2. Lateral shuffle with resistance band (3 sets × 8 reps each side) — Target: Lateral hip abductors and footwork speed

How this fixes your technique: Enhances quick, side-to-side foot placement and strengthens the muscles that keep the hips centred, reducing the direction anomaly seen in the video.

3. Box jump with soft landing (3 sets × 12 reps) — Target: Explosive power and landing mechanics

How this fixes your technique: Builds the power needed for a strong outleg push and trains the body to absorb impact safely, improving cadence and reducing the risk of overrecovery gaps.

Long-Term Performance Impact: Sticking to this routine will sharpen the player's footwork, allowing faster, more accurate shuttles and better recovery timing. The stronger hip stabilisers and core will reduce fatigue, while improved explosive power will translate to quicker runs between wickets and more powerful shots. Consistent movement patterns also lower the risk of

strains and shin injuries that often arise from uneven load distribution during rapid changes of direction.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	Oatmeal with sliced banana and a scoop of whey protein
Post-Training Recovery:	Chocolate milk or a whey protein shake with a handful of berries
Hydration Strategy:	Drink 500ml of water every 15 minutes during play; add a sports drink with 200■300mg sodium for longer sessions
Key Power Foods:	• Oats – steady carb supply for endurance • Bananas – potassium for muscle function • Chicken breast – lean protein for recovery
