

CRICFIT AI — YO-YO ENDURANCE TEST PERFORMANCE REPORT

Activity: Yo-Yo Endurance Test | Report ID: CF-DC4CFFF4 | Date: 07 Sep 2026, 10:08 PM

54/100
Overall Score (High Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You hit the target score of 16.5, showing you can sprint fast and keep up with the beep pace. However, you only completed three shuttles out of the 32 expected, and you were cutting into the mandatory recovery time – you’re not getting enough rest between bursts. Your stride pattern is uneven: the outleg is short and slow while the backleg is long and fast, which can throw off your balance and leave you tired sooner.

Shuttles Detected: 3 | Cadence Trend: Increasing

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	50/100	75.0 / 100	Poor
Lower Body Stability	50/100	75.0 / 100	Poor
Hip Mobility	50/100	75.0 / 100	Poor
Core Stability	50/100	75.0 / 100	Poor
Coordination	50/100	75.0 / 100	Poor
Body Symmetry	85/100	75.0 / 100	Elite
Movement Quality	46/100	75.0 / 100	Poor

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. SingleLeg Romanian Deadlift (3 sets × 10 reps each leg) — Target: Hip extensors & core stability

How this fixes your technique: Strengthens the glutes and hamstrings while forcing the core to stay tight, giving you a more stable base for a longer, controlled outleg.

2. Lateral Band Walks (3 sets × 15 steps each direction) — Target: Hip abductors & glute medius

How this fixes your technique: Builds lateral hip strength, improving balance and preventing the outleg from being too short or offline.

3. Depth Jumps (4 sets × 8 reps) — Target: Explosive power & coordination

How this fixes your technique: Trains the body to land softly and rebound quickly, helping you recover faster between shuttles and maintain the required rest gaps.

Long-Term Performance Impact: Consistently doing these drills will give you a stronger, more stable hip and core, allowing you to take longer, more powerful strides and return to the line on time. Better recovery means you’ll stay fresh for longer innings or bowling spells, and the improved balance will reduce the risk of ankle or knee injuries during rapid direction

changes.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	Oatmeal with sliced banana and a scoop of whey protein, 1–2 hours before training
Post-Training Recovery:	Chocolate milk or a protein shake with a banana, within 30 minutes of finishing
Hydration Strategy:	Start with 500 ml water 30 min before, then 250 ml every 15 min during play, add electrolytes if playing >90 min
Key Power Foods:	• Oats – steady carbs for long-lasting energy • Banana – potassium for muscle function • Chicken breast – lean protein for repair
