

CRICFIT AI — PERFORMANCE REPORT

Activity: **BATTING** | Report ID: CF-0464B528 | Date: 07 Sep 2026, 08:37 PM

92/100
Overall Score (Low Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

The player executed a pullshot with excellent timing and symmetry, matching the reference clip 95.8% of the time. Their elbow and knee angles were almost identical on both sides, showing good balance. However, the AI flagged a 12° mobility deviation, meaning their hips or knees aren't moving as freely as they should, which can limit power. Overall, the shot was clean but could be stronger with better joint mobility.

Identified Stroke: Pullshot (AI Confidence: 99.7%)

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	95/100	75.0 / 100	Elite
Lower Body Stability	82/100	75.0 / 100	Good
Hip Mobility	69/100	75.0 / 100	Needs Work
Core Stability	95/100	75.0 / 100	Elite
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	91/100	75.0 / 100	Elite
Movement Quality	95/100	75.0 / 100	Elite

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

- 1. Hip Flexor Stretch with Resistance Band (3 sets × 30 sec hold per side) — Target: Hip flexors and glutes**
How this fixes your technique: Loosens tight hip flexors, allowing a fuller hip rotation during the pullshot, which increases bat speed and power.
- 2. Single-Leg Romanian Deadlift (3 sets × 8 reps per leg) — Target: Hamstrings, glutes, and core stability**
How this fixes your technique: Improves unilateral hip extension and core control, reducing the 12° mobility deviation and enhancing balance during the shot.
- 3. Plank with Shoulder Tap (3 sets × 15 taps per side) — Target: Core and shoulder stability**
How this fixes your technique: Strengthens the core and shoulder girdle, ensuring a stable platform for the bat swing and preventing wobble that can lower shot accuracy.

Long-Term Performance Impact: Consistently performing these drills will expand hip and knee range, tighten core stability, and reinforce balanced movement patterns. This leads to faster bat speed, more powerful shots, and a lower risk of hamstring or shoulder injuries during high-intensity play.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	Oatmeal with sliced banana and a splash of milk (1-2 hours before training)
Post-Training Recovery:	Whey protein shake with a banana and a handful of berries (within 30 minutes after session)
Hydration Strategy:	Start with 500ml water 30 minutes before play, then sip 250ml every 20 minutes, adding a pinch of sea salt to replace electrolytes
Key Power Foods:	• Sweet potato – provides complex carbs for sustained energy • Salmon – rich in omega-3s for joint health and muscle recovery • Spinach – high in iron and antioxidants to support endurance and reduce fatigue
