

CRICFIT AI — PERFORMANCE REPORT

Activity: **BATTING** | Report ID: CF-69EA25A0 | Date: 07 Sep 2026, 05:06 PM

92/100
Overall Score (Low Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You nailed the pullshot with excellent timing and balance, matching a top reference almost perfectly. Your elbows and knees were a bit out of sync—about 8° difference—so the shot could lose some power. A little more hip mobility and core stability will help you drive the ball harder. Overall, your movement quality is very close to elite standards.

Identified Stroke: Pullshot (AI Confidence: 99.7%)

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	95/100	75.0 / 100	Elite
Lower Body Stability	82/100	75.0 / 100	Good
Hip Mobility	69/100	75.0 / 100	Needs Work
Core Stability	95/100	75.0 / 100	Elite
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	91/100	75.0 / 100	Elite
Movement Quality	95/100	75.0 / 100	Elite

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Hip Flexor Band Stretch (3 sets × 30 sec hold each side) — Target: Hip flexors and glutes

How this fixes your technique: Loosens tight hips, allowing a deeper stance and full extension of the pullshot, which translates to more bat speed.

2. Pallof Press (3 sets × 10 reps each side) — Target: Core stability and anti-rotation strength

How this fixes your technique: Builds a rigid core that keeps the torso stable during the swing, preventing the asymmetry from affecting power transfer.

3. Single-Leg Romanian Deadlift (3 sets × 12 reps each leg) — Target: Knee alignment and glute activation

How this fixes your technique: Improves knee tracking and balance, reducing the 8° asymmetry and enhancing the drive from the lower body into the bat.

Long-Term Performance Impact: By consistently working on hip mobility, core stability, and knee alignment, you'll create a smoother, more powerful pullshot with less strain on the joints. The routine tightens the kinetic chain, so you'll hit the ball harder and with greater consistency while lowering the risk of hamstring, groin, or shoulder injuries.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	1 cup oatmeal with a sliced banana and a drizzle of honey (carbs for energy, simple sugars for quick fuel)
Post-Training Recovery:	Whey protein shake with 1 cup skim milk and a handful of berries, plus a small sweet potato (protein for repair, carbs for glycogen refill)
Hydration Strategy:	Start 500ml water 2 hours before, sip 250ml every 15 minutes during play, and add a sports drink with electrolytes (sodium, potassium) after 30 minutes of intense activity
Key Power Foods:	• Oats – steady carbs and fiber for sustained energy • Banana – potassium for muscle function • Salmon – omega3s and protein for recovery
