

CRICFIT AI — PERFORMANCE REPORT

Activity: **BATTING** | Report ID: CF-D84AB55E | Date: 07 Sep 2026, 07:10 PM

92/100
Overall Score (Low Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You nailed the pullshot with great timing and symmetry – the camera saw a 95.8% match to the ideal model. Your elbow and knee angles were close enough, and you kept a solid core throughout. The only thing that could use a tweak is a bit of tightness in your hips and a small balance wobble that can limit power. Fixing that will let you swing harder and stay steadier on the crease.

Identified Stroke: Pullshot (AI Confidence: 99.7%)

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	95/100	75.0 / 100	Elite
Lower Body Stability	82/100	75.0 / 100	Good
Hip Mobility	69/100	75.0 / 100	Needs Work
Core Stability	95/100	75.0 / 100	Elite
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	91/100	75.0 / 100	Elite
Movement Quality	95/100	75.0 / 100	Elite

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Dynamic Hip Flexor Stretch (3 sets × 10 reps each side) — Target: Hip flexors and glutes

How this fixes your technique: By increasing hip rotation and extension, you allow the bat to travel further, giving you more power and a cleaner pull.

2. Pallof Press (3 sets × 12 reps) — Target: Core anti-rotation strength

How this fixes your technique: Strengthens the deep core muscles that keep you stable during the swing, preventing wobble and improving shot accuracy.

3. Single-Leg Balance with Medicine Ball Toss (3 sets × 15 reps) — Target: Dynamic balance and proprioception

How this fixes your technique: Enhances foot-to-hip coordination, so you can maintain balance while generating power, reducing the chance of a misstep.

Long-Term Performance Impact: Consistently working on hip mobility and core stability will let you swing the bat with a longer, more powerful arc while keeping your balance intact. This translates to higher shot power, better shot placement, and a lower risk of hamstring or lower-back strains during long innings.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	1 cup oatmeal with a sliced banana and a scoop of whey protein
Post-Training Recovery:	Chocolate milk or a protein shake with a handful of berries
Hydration Strategy:	Start with 500 ml water 30 min before play, then sip 250 ml every 20 min, adding a pinch of sea salt to replace electrolytes
Key Power Foods:	• Sweet potato – fast glycogen refill for endurance • Salmon – omega-3s for joint health and recovery • Greek yogurt – high protein for muscle repair
