

CRICFIT AI — PERFORMANCE REPORT

Activity: **BATTING** | Report ID: CF-E585BFA0 | Date: 07 Sep 2026, 07:14 PM

92/100
Overall Score (Low Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You hit a great pullshot that matched the reference clip 95.8% of the time – the bat swing and timing were spot on. Your balance and core feel are solid, but there’s a small asymmetry in your elbow and knee angles (about 8°) and a 12° mobility gap that can limit power. Fixing that will make your shots even more powerful and consistent.

Identified Stroke: Pullshot (AI Confidence: 99.7%)

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	95/100	75.0 / 100	Elite
Lower Body Stability	82/100	75.0 / 100	Good
Hip Mobility	69/100	75.0 / 100	Needs Work
Core Stability	95/100	75.0 / 100	Elite
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	91/100	75.0 / 100	Elite
Movement Quality	95/100	75.0 / 100	Elite

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Hip Circles with Band (3 sets × 15 reps each direction) — Target: Hip joint and surrounding flexors

How this fixes your technique: Loosens tight hip flexors and improves rotational range, allowing a fuller hip turn and better transfer of power from the legs to the bat.

2. Single-Leg Romanian Deadlift (3 sets × 10 reps per leg) — Target: Glutes, hamstrings, core stability

How this fixes your technique: Builds unilateral hip stability and balance, correcting the knee angle asymmetry and ensuring both legs contribute equally to the drive.

3. Pallof Press (3 sets × 12 reps per side) — Target: Transverse abdominis, obliques

How this fixes your technique: Strengthens anti-rotation core, keeping the torso stable during the swing and reducing core instability that can affect shot consistency.

Long-Term Performance Impact: By consistently working on hip mobility, unilateral leg drive, and core anti-rotation, you’ll swing with a fuller range, generate more bat speed, and hit shots with greater power and accuracy. These drills also reinforce balanced movement patterns, lowering the risk of lower-back or hamstring strains during high-intensity play.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	Oatmeal with a sliced banana and a splash of milk (30–45 mins before)
Post-Training Recovery:	Chocolate■protein shake with a handful of berries and a small handful of almonds (within 30 mins after)
Hydration Strategy:	Start with 500ml water 2 hours before, sip 200ml every 15 mins during play, and replace electrolytes with a sports drink if playing >90 mins
Key Power Foods:	• Oats – steady carbs for sustained energy • Salmon – omega■3s for joint health and muscle recovery • Spinach – iron and magnesium for stamina and muscle function
