

CRICFIT AI — PERFORMANCE REPORT

Activity: **BATTING** | Report ID: CF-F7D1068E | Date: 07 Sep 2026, 07:03 PM

92/100
Overall Score (Low Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

The player executed a pullshot with excellent timing and symmetry, matching the reference clip 95.8% of the time. Their core and balance were solid, showing little wobble during the swing. However, the mobility indicator of 12° suggests a slight restriction in hip or knee movement that could limit power. Overall, the shot was clean but could be more powerful with better joint mobility.

Identified Stroke: Pullshot (AI Confidence: 99.7%)

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	95/100	75.0 / 100	Elite
Lower Body Stability	82/100	75.0 / 100	Good
Hip Mobility	69/100	75.0 / 100	Needs Work
Core Stability	95/100	75.0 / 100	Elite
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	91/100	75.0 / 100	Elite
Movement Quality	95/100	75.0 / 100	Elite

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Hip Flexor Stretch with Knee Drive (3 sets × 30 sec hold each side) — Target: Hip flexors and knee extensors
How this fixes your technique: Stretching the hip flexors and gently driving the knee straightens the joint line, expanding the swing arc and allowing more forceful pullshots.

2. Goblet Squat with Focus on Knee Tracking (4 sets × 8 reps) — Target: Quadriceps, glutes, and knee stability
How this fixes your technique: Encourages proper knee alignment over the toes, strengthening the knee joint and improving weight transfer during the shot.

3. Single-Leg Balance with Medicine Ball Pass (3 sets × 15 reps per leg) — Target: Core stability and ankle proprioception
How this fixes your technique: Builds unilateral core control and ankle stability, reducing asymmetry and supporting a smoother swing rhythm.

Long-Term Performance Impact: Consistently performing these drills will widen the batter's hip and knee range, allowing a fuller swing and greater power. Improved joint mobility and core stability reduce the risk of lower back and knee injuries, while better balance keeps the body steady under pressure. Over time, these gains translate to more consistent, powerful

shots and a lower injury incidence during matches.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	A banana with a small handful of almonds or a slice of wholegrain toast with peanut butter 1–2 hours before training
Post-Training Recovery:	A protein shake with whey protein, a banana, and a scoop of oats, or a chickenrice bowl with mixed veggies
Hydration Strategy:	Drink 500 ml of water 2 hours before play, then sip 250 ml every 15 minutes during a 90minute session, adding a pinch of sea salt to replace electrolytes
Key Power Foods:	• Oats – provides sustained energy and gut-friendly fiber • Spinach – rich in iron and magnesium for muscle function • Greek yogurt – high protein and probiotics for recovery
