

CRICFIT AI — BATTING ANALYSIS PERFORMANCE REPORT

Activity: **Batting Analysis** | Report ID: CF-27BE0802 | Date: 08 Sep 2026, 10:08 AM

92_{/100}
Overall Score (Low Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You nailed the pullshot with great timing and a solid stance. Your elbow and knee angles were almost identical on both sides, showing good symmetry. The only thing that stood out was a small mobility gap that could limit your reach and power. Overall, your core and balance were strong, keeping you stable through the swing.

Identified Stroke: Pullshot (AI Confidence: 99.7%)

PROGRESS & EFFICIENCY COMPARISON:

Compared to your last session, your coordination is now perfect - no timing slips at all. Your symmetry stayed at the same high level, but the mobility indicator has risen slightly, meaning there's a bit more room to improve your hip and ankle flexibility. Your core stability remains solid, so you're on the right track.

COACH'S ATHLETIC BOOST:

"Great job staying consistent! Keep pushing on that mobility work and you'll feel even more explosive on the field."

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	95/100	75.0 / 100	Elite
Lower Body Stability	82/100	75.0 / 100	Good
Hip Mobility	69/100	75.0 / 100	Needs Work
Core Stability	95/100	75.0 / 100	Elite
Coordination	95/100	75.0 / 100	Elite
Body Symmetry	91/100	75.0 / 100	Elite
Movement Quality	95/100	75.0 / 100	Elite

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Hip Flexor Stretch with Ankle Mobilization (3 sets × 30 sec hold per side) — Target: Hip flexors and ankle joint
How this fixes your technique: Stretching the hip flexors and mobilizing the ankle opens the hip joint, allowing a fuller swing arc and better power transfer from the legs to the bat.

2. Single■Leg Balance Squat (3 sets × 8 reps per leg) — Target: Lower body stability and proprioception
How this fixes your technique: Improves ankle and knee stability, ensuring both legs stay aligned during the swing and reducing the risk of uneven load distribution.

3. Side■Plank with Hip Drop (3 sets × 15 sec per side) — *Target: Obliques and core stability*

How this fixes your technique: Strengthens the obliques and stabilizes the pelvis, helping maintain a straight bat line and preventing unwanted hip drop during the pullshot.

Long-Term Performance Impact: By consistently working on hip and ankle mobility, you'll unlock a longer, more powerful swing, translating to higher shot ceilings. Strengthening lower■body stability ensures both legs stay aligned, reducing the chance of uneven load and injury. Core drills keep your torso stable, allowing you to transfer energy efficiently from the legs to the bat. Together, these improvements will boost your batting consistency, power, and resilience on the field.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	A banana with a handful of almonds or a small bowl of oatmeal 1-2 hours before training gives you quick carbs and protein for energy.
Post-Training Recovery:	A protein shake with whey and a banana or a chicken■rice bowl within 30 minutes helps muscle repair and glycogen refill.
Hydration Strategy:	Drink 500 ml of water 2 hours before play, then sip 200 ml every 15 minutes during the session. Add a sports drink with electrolytes during longer games to replace sodium and potassium.
Key Power Foods:	• Oats - steady carbs for endurance • Chicken breast - lean protein for muscle repair • Spinach - iron and magnesium for stamina
