

CRICFIT AI — YO-YO ENDURANCE TEST PERFORMANCE REPORT

Activity: Yo-Yo Endurance Test | Report ID: CF-EA82294F | Date: 08 Sep 2026, 09:41 AM

54/100
Overall Score (High Risk)

1. ATHLETE PERFORMANCE & TECHNICAL SUMMARY

You kept a steady rhythm, especially in the last two shuttles, showing good speed and confidence. However, you started slow, had a few missteps, and didn't fully recover between shuttles. Your hips and legs were moving well, but the direction of your turns and the final leg extension were off.

Shuttles Detected: 3 | Cadence Trend: Increasing

PROGRESS & EFFICIENCY COMPARISON:

Since this is your first recorded session, we're celebrating the baseline you've set. Your cadence is already improving across shuttles, which is a great sign of developing speed and coordination. The next sessions will help you build on this momentum and address the small gaps we spotted.

COACH'S ATHLETIC BOOST:

"Great job getting into the groove! Keep pushing-every step forward brings you closer to that elite level you're aiming for."

2. BIOMECHANICAL METRICS (0 – 100)

Biomechanical Metric	Score	Standard Benchmark	Status
Balance	50/100	75.0 / 100	Poor
Lower Body Stability	50/100	75.0 / 100	Poor
Hip Mobility	50/100	75.0 / 100	Poor
Core Stability	50/100	75.0 / 100	Poor
Coordination	50/100	75.0 / 100	Poor
Body Symmetry	85/100	75.0 / 100	Elite
Movement Quality	46/100	75.0 / 100	Poor

3. TARGETED CRICKET FITNESS DRILLS & IMPROVEMENT MECHANICS

1. Lateral Shuffle with Hip Rotation (3 sets × 20 steps (10 each direction)) — Target: Hip abductors and core stability

How this fixes your technique: Focuses on keeping hips rotating smoothly while moving sideways, correcting the direction anomaly and improving stride length.

2. Single■Leg Balance with Dynamic Hip Extension (3 sets × 8 reps per leg) — Target: *Gluteus medius and hamstrings*
How this fixes your technique: Builds balance and hip control, ensuring full leg extension and reducing partial leg issues.

3. Bounding Plyometrics (3 sets × 12 bounds) — Target: *Explosive power in legs and hips*
How this fixes your technique: Enhances speed, stride length, and the ability to recover quickly between shuttles.

Long-Term Performance Impact: By consistently practicing these drills, you'll sharpen your hip rotation, extend your stride fully, and maintain proper rest intervals. This will translate to faster lateral movements on the field, stronger shots off the bat, and a lower risk of hamstring or hip injuries during high■intensity play.

4. CRICKET NUTRITION & RECOVERY GUIDELINES

Pre-Training Energy:	1 banana + 1/2 cup oats + a splash of milk (30■45 min before training)
Post-Training Recovery:	Whey protein shake + 1 cup cooked rice + mixed veggies (within 30 min after training)
Hydration Strategy:	Start with 500ml water 2 hours before; sip 200ml every 15 min during training; add a sports drink with electrolytes for sessions >60 min
Key Power Foods:	• Bananas - quick carbs for energy • Chicken breast - lean protein for muscle repair • Sweet potatoes - complex carbs and potassium for endurance
